

Higher Order Function:

A function that returns a function or passing the another function as an argument that is called higher order function.

Example:

```
setTimeout(()=>
{
  console.log("Run after 2 second");
},2000);
```

```
function greet(prefix) {
  return function(name) {
    console.log(prefix + " " + name);
  };
}
```

```
const sayHello = greet("Hello");
```

```
const sayHi = greet("Hi");
```

```
sayHello("John"); // Output: Hello John
```

```
sayHi("Alice"); // Output: Hi Alice
```
