

## Static :

1. **Static is keyword in javascript**
2. **Static is used with the method and the variables**
3. **Static method and variable can accessible using the class name .**

```
class ClassWithStaticMethod {  
    static staticProperty = 'someValue';  
    static staticMethod() {  
        return 'static method has been called.';  
    }  
    static {  
        console.log('Class static initialization block called');  
    }  
}
```

```
console.log(ClassWithStaticMethod.staticProperty);  
// Expected output: "someValue"  
const data = new ClassWithStaticMethod();  
data.staticMethod();  
console.log(ClassWithStaticMethod.staticMethod());  
// Expected output: "static method has been called."
```
