

Arrow functions :-

1. Arrow function is the one of the feature of javascript which is coming in EcmaScript
2. Arrow function is actually used to creating the concise code of the function
3. Their are various syntax to that arrow function

Example

```
const addTwo = (num1,num2)=>num1+num2;  
console.log(addTwo(8,9));//17
```

```
const addThree = (num1,num2,num3)=>(num1+num2+num3);  
console.log(addThree(5,6,7));//18
```

```
const addFour = (num1,num2,num3,num4)=>{  
    return num1+num2+num3+num4;  
}  
console.log(addFour(8,9,10,11)); //38
```

```
const returningObject = ()=>({userName : "Manu"});  
console.log(returningObject());// {userName : "Manu"}
```

```
const myArray=[10,30,50];  
myArray.forEach((e)=>console.log(e));// 10 30 50
```

4. They do not have access the new keyword , Type Error
5. We cannot use the this keyword in the arrow function
6. Arrow function is not used as a constructor
